Viable/Nonviable/Environmental Monitoring

The FacilityPro® processor provides the central hub for an environmental monitoring system. The processor communicates with cleanroom sensors, including particle and microbial monitors, while buffering data and checking tolerances for alarm activation.

Industrial Automation Architecture

As a key component of industrial automation architecture, this embedded system offers high reliability as it controls samples and communicates with central software.

Three Versions

FacilityPro processors are available in three versions, with varying features to support a range of system designs and applications:

- FacilityPro 5010
- FacilityPro 3010
- FacilityPro 1010

All three FacilityPro processors are compatible with either the FacilityPro SCADA NG server software or the FacilityPro SMART NG server module.

BENEFITS

- Designed specifically for pharmaceutical environmental monitoring
- Integration and control of viable and nonviable sampling
